

A Playbook for Leading Technology and Innovation in Traditional Environments

Alicia M Morgan, PMP[®], AM-MC[®]
Innovation Strategist

Theme: Unite, Empower, Elevate!

Evolution in Leadership

- 2017 EWTG Conference "**Leading with Executive Presence**" focus was executive presence for personal influence and advancement.
- 2025 Applying Executive Leadership to **Strategic Execution Excellence** in regulated environments.
- **Opening Insight:** How do we transition from managing crisis and compliance failures to **Thinking Capital** that drives Strategic Execution Excellence?

Learning Objectives

Lead

Lead technology advancement using project management practices tailored for traditional, high-compliance sectors.

Empower

Empower cross-functional teams to adopt emerging tools (AI, data platforms, systems) with agility and structure.

Navigate

Navigate governance, ethics and data risks when delivering innovation and technology advancement at scale.

The Execution Challenge

Rapid GenAI adoption vs. legacy system limitations

AI-powered cyber threats vs. compliance gaps

Solution: Auditable structure for risk-managed deployment

Governing Technology and Innovation

Technology: Playbook mandates, auditable structure for all emerging tools, transforming risk into compliant capability.

Innovation: We ensure governance enables - not restricts - the scaling of breakthrough initiatives across the enterprise, advancing our mission with discipline and speed.

Section 1: Lead(Unite)

Governance Must Win

- Accelerating AI adoption creates a structural gap between technology speed and existing governance controls.
- Existing processes fail to guarantee reliable data inventory or consistent project oversight, creating critical compliance gaps.
- Leadership must mandate a redesign of PM practices to close execution and audit gaps before scaling technology.

Accountability is Key

A collection of colorful geometric shapes including a green triangle, a purple circle, a blue checkmark, a purple circle, a blue dashed line, and an orange circle.

- Legal & Policy Vetting:
Mandatory sign-off for statutory alignment
- Security & Data Vetting: National Institute of Standards and Technology(NIST) Framework compliance
- Executive Sponsor: Final authorization and risk acceptance

Structure Sets Control

The Legislative Liaison: Tracks and monitors legislative changes relevant to the technology portfolio.

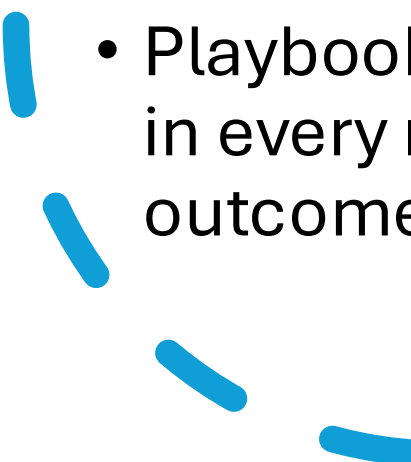

Policy Product Owner: Owns the project backlog, acting as the critical bridge between vision and compliance.

The Cross-Functional Compliance Team: Executes the mandatory policy, security, and ethics vetting checks.

TEXAS HB 5195: MANDATORY

- Mandate: Modernize all state digital services and websites to meet new statewide standards.
 - Challenge: Upgrade legacy systems while preserving trust, security, and seamless service delivery.
 - Playbook Solution: Embed governance, compliance, and security in every modernization milestone to deliver validated, high-quality outcomes.
- 

Lead Playbook Actions

| | |
|----------|--|
| Appoint | Appoint Legislative Liaison & Policy Product Owner (PPO) by [30 days] |
| Activate | Activate Compliance Gate controls on 3 high-priority initiatives |
| Initiate | Initiate Agency Data Audit to close Government Accountability Office(GAO) gaps |
| Mandate | All three actions before technology deployment |

Section 2: Empower

Scaling Barrier

Key Barrier: The inability to scale innovation stops high-value initiatives (e.g., AI policy-answering tools and enterprise data dashboards) from reaching full adoption.

Focus: Frameworks must unlock productivity by demanding enterprise-grade governance from the start.

Mantra: Structure risk, don't stop innovation.

Empower Your Teams

- **Human Capital:** The collaborative knowledge, skill, and expertise of the workforce, focused on achieving AI/Data literacy for governance and legal roles.
- **Social Capital:** The internal network of mutual trust that facilitates rapid, cross-functional compliance and risk decisions.
- **Innovation Capital:** The credibility and reputation earned by consistently linking compliant execution to high-priority business value.

Structured For Adoption

1

Phase 1: Phase 1:
Controlled Pilot (30-60
days)

2

Phase 2: Review & Adjust
Review & Adjust -
Threat Modeling + PIA
(60-90 days)

3

Phase 3: Scale & Train
Scale & Train -
Enterprise deployment
(90+ days)

Empower Playbook Actions

| | |
|-----------|--|
| Establish | AI Governance Task Force (Legal, IT, Ethics) |
| Require | Privacy Impact Assessment (PIA) for all Phase 2 pilots |
| Allocate | Training budget for Policy & Legal teams |
| Mandate | Task Force charter signed within 45 days |

A close-up photograph of a metal key, likely a combination lock key. The key is silver-colored and has a question mark symbol engraved on its upper part. Below the question mark, the number '9' is visible. The key is positioned vertically, and the background is a blurred gradient of yellow and orange.

Section 3: Navigate(Elevate)

Navigate Governance

- Proactively add ethical and governance checks to preserve public trust in all major deployments.
- New Risk: Trust fails due to lack of algorithmic transparency, embedded bias, or data breaches.
- Solution: The NIST Risk Management Framework transforms risk into a predictable, design constraint by providing a verifiable standard.

The Three Pillars of Trust

- **Pillar 1:** Consistency & Neutrality: Protect against unintended outputs and ensure decision making is standardized across all data sets
- **Pillar 2:** Data Integrity & Resilience: Implement Secure by Design principles to guarantee data validity and system continuity
- **Pillar 3:** Human Oversight & Vetting: Guarantee clear human involvement, explanation, and final authorization for all automated decisions.

Texas Legislative Context:

Data Security Gate: SB 765 (Security of personal identifying information)

Application: The Project must demonstrate pre-deployment compliance with SB 765.

AI Governance Gate: HB 149
(Monitored concerning the use of artificial intelligence)

Application: The Project must pass an internal review against the spirit of this bill.

Executive Ethics Pre-Review Checklist

✓ Use Case Alignment

✓ Data Governance & Quality

✓ Human in the Loop

✓ De-escalation Plan

✓ Explainability & Technical Transparency

Navigate Playbook Actions

Executive review: Ethics
Pre-Review Checklist for
next major deployment

Audit compliance
against Three Pillars of
Trust

Transform modernization
into validated, compliant
public services

Mandate: Ethics review
required before any
production release

A close-up photograph of a vertical metal component, possibly a part of a machine or a tool. The component is made of a dark, textured metal. Near the top, there is a large, stylized question mark. Below the question mark, there are two small, circular indentations. Further down, there are two small, rectangular markings that look like the numbers '2' and '11'. At the bottom, there is a small, circular indentation. The background is a soft, out-of-focus gradient of light brown and yellow.

Integration & Closing

Recap: Playbook

Lead: We close the Execution Gap for mandating Compliance Gate controls and establishing PPO roles across all major initiatives

Empower: We break the Scaling Barrier by formalizing the Adoption Engine and investing in the AI Governance Task Force

Navigate: We achieve Strategic Execution Excellence by mandating verifiable compliance with the Three Pillars of Trust and Ethics Oversight

Your Executive Execution Strategy

IMMEDIATE: Self-Assessment

- Governance Gap: Do you have PPO & Legislative Liaison roles?
- Scaling Gap: Can pilots move to production with current gates?
- Capability Gap: Are teams trained for AI governance duties?

STRATEGIC FOLLOW-ON (Next 90 Days)

- Initiate PPO appointment
- Commission Privacy Impact Assessment
- Schedule first Compliance Gate Review
